Academic program and course description guide

#### INTRODUCTION:

The educational program is considered a coordinated and organized package of academic courses that includes procedures and experiences organized in the form of academic vocabulary, the primary purpose of which is to build and refine the skills of graduates, making them qualified to meet the requirements of the labor market. It is reviewed and evaluated annually through internal or external audit procedures and programs such as the External Examiner Program.

The academic description provides a brief summary of the main features of the program and its courses, indicating the skills that are being worked on to acquire the students, based on the objectives of the academic program. The importance of this description is evident because it represents the cornerstone of obtaining program accreditation, and the teaching staff participates in writing it under the supervision of the scientific committees in the scientific departments.

This guide, in its second edition, includes a description of the academic program after updating the vocabulary and paragraphs of the previous guide in light of the latest developments in the educational system in Iraq, which included a description of the academic program and its traditional form (annual, quarterly), in addition to adopting the description of the academic program circulated according to the book of the Department of Studies, 3/2906. On 5/3/2023 regarding programs that adopt the Bologna Process as a basis for their work.

In this area, we can only emphasize the importance of writing descriptions of academic programs and courses to ensure the smooth conduct of the educational process.

### Concepts and terminology

## Description of the academic program

This academic program description provides a necessary summary of the most important characteristics of the program and the learning outcomes that the student is expected to achieve, demonstrating whether he has made the most of the available opportunities, and is accompanied by a description of each course within the program.

## Course description

This course description provides a necessary summary of the most important characteristics of the course and the learning outcomes that the student is expected to achieve, demonstrating whether he or she has made the most of the learning opportunities available, and this must be linked to the program description.

### Program vision

An ambitious picture for the future of the academic program, to be an advanced, inspiring, motivating and realistic programmed.

#### Program message

It briefly explains the objectives and activities necessary to achieve them, and also identifies the program's development paths and directions.

#### **Program Goals**

They are statements that categorize what the academic program intends to achieve within a specific period of time and are measurable and observable.

#### Curriculum structure

All courses/study subjects included in the academic program according to the approved learning system (semester, annual, Bologna track), whether it is a requirement (ministry, university, college, or scientific department), along with the number of study units.

The prescribed curriculum is a 4-course system divided into two study stages

First year: First semester: 35 units

First year: Second semester: 35 units

Second year: First semester: 34Unit

Second year: Second semester: 34 units

Teaching and learning strategies: Multiple methods are used, such as presentations containing pictures and explanatory videos, as well as directing oral and written questions (homework), preparing reports, and quick and semester examinations.

## **Learning Outcomes**

A compatible set of knowledge, skills and values that the student has acquired after successfully completing the academic program. The learning outcomes for each course must be determined in a way that achieves the program objectives.

Teaching and learning strategies

They are the strategies used by the faculty member to develop the student's teaching and learning. They are plans that are followed to reach the learning objectives, that is, they describe all curricular and extracurricular activities to achieve the learning outcomes of the program.

#### 1- The vision of the program

That the Community Health Department becomes known regionally and globally thanks to its achievements in the fields of health care, leadership, education, and scientific research.

#### 2- Program message

Achieving excellence in teaching and learning in the field of community health through the development and implementation of strong educational programs and research activities, leading to enhanced health care services and access to all members of the community

## 3- Program objectives

The department aims to graduate technical personnel in environmental health, occupational safety, inspection, health control, health surveys, implementing primary health care programs, carrying out health awareness campaigns, and operating and caring for special devices.

Preparing students to become community leaders in competence and professionalism in the field of community health.

Emphasizing the importance of health education in the educational and professional aspects to increase individual, family and community awareness towards achieving self-care.

Cooperating with public and private organizations in meeting the health needs of the community

## 4- Program accreditation

### Nothing

#### 5- Other external influences

## 8- The expected learning outcomes of the program

## Knowledge

- Knows the concept of community health
- -Explains to the student the components of community health
- Explains the community health program to the student
- Explains to the student the development of the framework for community health programs
- Explains to the student the development that primary health care has reached
- It gives the student applied examples of health conditions in society

#### **Skills**

- Collects information about health phenomena and problems
- Analyze the causes of these problems.
- Compares past and present experiences
- Communication and communication skills
- 9- Teaching and learning strategies
- Using the presentation and presentation method

- Drawing illustrative diagrams
- Brainstorming method
  - 10- Evaluation methods
- True and false questions
- -Multiple choice questions
- Questions for clarifications
- Duties
- self evaluation

Tests (monthly, semester, final)

#### Professional development

Orienting new faculty members

Guiding new faculty members through specialized workshops and placing them between permanent and temporary committees under the supervision of old members in order to develop their teaching and administrative skills.

Professional development for faculty members

Providing proposals to develop curricula and introducing new learning methods to deliver information to students clearly and smoothly. 12- Acceptance standard

- 1- Central admission through admission lists issued by the Ministry of Higher Education and Scientific Research
- 2- Direct application through applying for evening study
- 3- Graduate of the scientific branch
- 4- Rate higher than 80%
- 13- The most important sources of information about the program
- 1- Employing students in the Ministry of Health after graduation.
- 2- Follow-up and practice by students and work to raise the level of students in educational institutions.
- 14- Program development plan

Keeping pace with the development of educational curricula

### (Principles of Community Health)

It aims to identify the most important concepts of community health and related techniques.

1- Educational institution	Middle Technical University-
	<b>Technical Institute / Kut</b>
2- Scientific Department/Center	<b>Department of Community Health</b>
	Technologies_First Phase
3- Course name/code	Principles of Community Health
4- The programs in which he	department
participates	
5- Available forms of attendance	Built-in
6- Semester/year	Academic year 2023-2024, First
	semester
7- Number of study hours (total)	theoretical2 * 15 weeks = 30total
	hours and 3 practical $*$ 15 weeks = 45
	hours
8- The date this description was	19/2/2024
prepared	

- 9- Course objectives
  - 1- At the end of the academic year, students will have the ability to learn about community health concepts and related techniques.
- 10- Course outcomes and teaching, learning and evaluation methods
- A- Cognitive objectives
  - 1. The student becomes familiar with general concepts about the most important community health terms.
  - 2. Identify the goals and strategies of the community health system.
  - 3. Identify the services provided in primary health care centers.

- 4. Learn how to organize forms for pregnant women, children, and the family registry.
- 5. Identify the most important types of vaccines and ways to deal with them.
- 6. Identify health information and measures of health and disease

#### **B-** The skills objectives of the course

- 1- He can manage programs related to community health, such as maternal and child care, vaccinations, etc.
- 2- It can help the doctor diagnose and treat in some way, basically and simply when necessary

### C- Teaching and learning methods

- 1- The teacher delivers detailed theoretical lectures.
- 2- The teacher requests the implementation of some skills.
- 3- Asking some intellectual questions.
- 4- Requesting the submission of some reports from the library and the Internet.
- 5- Using the method of brainstorming and feedback by activating the accumulated experiences of students.

#### **D-** Evaluation methods

- 1- Individual evaluation by giving the student the opportunity to answer some questions.
- 2- Group evaluation through a short and quick exam.
- 3- Evaluation through daily assignments.
- 4- Monthly, end-of-semester and final exams.

#### E- Emotional and value-based goals

- 1- Urging the student to think in different ways.
- 2- Urging the student to think about the importance of the subject and the danger of neglecting it.
- 3- Urging the student to acquire some skills that he can apply in practical life.

#### F- Evaluation methods

1- A monthly exam (15% practical + 25% theoretical) that takes into account

daily activities.

- 2- End of semester exam (25% practical + 35% theoretical).
- G- General and qualifying transferable skills (other skills related to employability and personal development)
- 1- Enabling students to write reports related to general anatomy.
- 2- Enabling students to perform matching the practical reality.
- 3- Enabling students for continuous self-development after graduation.
- H- Other learning and teaching methods
- 1- Preparing and implementing research and projects by students within the vocabulary of the Department of Community Health Technologies' subjects and presenting them at student conferences.
- 2- Developing an update to the vocabulary of the Fundamentals of general anatomy subject to keep pace with development in order to achieve personal development for the level of students.
- 3- Discussion of research and projects by scientific committees in the department.
- 4- Written tests.
- 5- Direct observations.

16-	Semester/year	Academic year 2023-2024, second
		semester
17-	Number of study hours (total)	theoretical2 * 15 weeks = 30total
		hours and 2 practical $*$ 15 weeks = 30
		hours
18-	The date this description was	20/2/2024
pr	repared	

- 19- Course objectives
- 1. The student will be able to get a simple general idea about: pathogens (bacteria, fungi, parasites and viruses), immunity and disease prevention.
- 20- Course outcomes and teaching, learning and evaluation methods
- A- Cognitive objectives
- 1- The student gets to know general concepts about the most important microbiology terms.
- 2- The student learns about the precise structure of most microscopic organisms.
- B- The skills objectives of the course
- 1. Student will be able to:
  - To diagnose some simple cases in his field work, instead of specialest, when specialest is absent.
  - Do some tests in the labs.
  - Collect, preserve and transport the pathgenic samples.
  - Give an advice for disease prevention and control.
- C- Teaching and learning methods
- 1- The teacher delivers detailed theoretical lectures.

- 2- The teacher requests the implementation of some skills.
- 3- Asking some intellectual questions.
- 4- Requesting the submission of some reports from the library and the Internet.
- 5- Using the method of brainstorming and feedback by activating the accumulated experiences of students.

#### **D- Evaluation methods**

- 1- Individual evaluation by giving the student the opportunity to answer some questions.
- 2- Group evaluation through a short and quick exam.
- 3- Evaluation through daily assignments.
- 4- Monthly, end-of-semester and final exams.
- E- Emotional and value-based goals
- 1- Urging the student to think in different ways.
- 2- Urging the student to think about the importance of the subject and the danger of neglecting it.
- 3- Urging the student to acquire some skills that he can apply in practical life.

#### F- Evaluation methods

- 1- A monthly exam (15% practical + 25% theoretical) that takes into account daily activities.
- 2- End of semester exam (25% practical + 35% theoretical).
- G- General and qualifying transferable skills (other skills related to employability and personal development)
- 1- Enabling students to write reports related to general anatomy.
- 2- Enabling students to perform matching the practical reality.
- 3- Enabling students for continuous self-development after graduation.

### H- Other learning and teaching methods

- 2- Preparing and implementing research and projects by students within the vocabulary of the Department of Community Health Technologies' subjects and presenting them at student conferences.
- 2- Developing an update to the vocabulary of the Fundamentals of microbiology

- subject to keep pace with development in order to achieve personal development for the level of students.
- 3- Discussion of research and projects by scientific committees in the department.
- 4- Written tests.
- 5- Direct observations.

pr	prepared					
29-	29- Course objectives					
2. Knows the normal ratios of chemical compounds in the blood. Recognize						

### the variables that can occur to these compounds in abnormal cases.

- 30- Course outcomes and teaching, learning and evaluation methods
- A- Cognitive objectives
- 1- It uses the levels of these compounds in the blood serum to measure the efficiency of the functional performance of some body organs such as the liver and kidneys.
- 2- Diagnoses various diseases in terms of changes that occur in the levels of these compounds in blood and other body fluids.
- B- The skills objectives of the course
- 2. Know the different laboratory methods that are used in clinical chemistry laboratories.
- 3. Uses devices that are used in clinical chemistry laboratories 9) Measures the levels of chemical components important in diagnosing diseases in the blood laboratory...
- C- Teaching and learning methods
- 1- The teacher delivers detailed theoretical lectures.
- 2- The teacher requests the implementation of some skills.
- 3- Asking some intellectual questions.
- 4- Requesting the submission of some reports from the library and the Internet.
- 5- Using the method of brainstorming and feedback by activating the accumulated experiences of students.
- **D-** Evaluation methods
- 1- Individual evaluation by giving the student the opportunity to answer some questions.

#### C- Teaching and learning methods

- 1- The teacher delivers detailed theoretical lectures.
- 2- The teacher requests the implementation of some skills.
  - 3- Asking some intellectual questions.
- 4- Requesting the submission of some reports from the library and the Internet.
  - 5- Using the method of brainstorming and feedback by activating the accumulated experiences of students.

#### **D-** Evaluation methods

1- Individual evaluation by giving the student the opportunity to answer some

# questions.

- 2- Group evaluation through a short and quick exam.
  - 3- Evaluation through daily assignments.
  - 4- Monthly, end-of-semester and final exams.

# E- Emotional and value-based goals

- 1- Urging the student to think in different ways.
- 2- Urging the student to think about the importance of the subject and the danger of neglecting it.
- 3- Urging the student to acquire some skills that he can apply in practical life.

# F- Evaluation methods

- 1- A monthly exam (15% practical + 25% theoretical) that takes into account daily activities.
  - 2- End of semester exam (25% practical + 35% theoretical).
  - G- General and qualifying transferable skills (other skills related to employability and personal development)
    - 1- Enabling students to write reports related to physiology.
    - 2- Enabling students to perform matching the practical reality.
  - 3- Enabling students for continuous self-development after graduation.

- 9- Preparing and implementing research and projects by students within the vocabulary of the Department of Community Health Technologies' subjects and presenting them at student conferences.
- 2- Developing an update to the vocabulary of the Fundamentals of physiology subject to keep pace with development in order to achieve personal development for the level of students.
  - 3- Discussion of research and projects by scientific committees in the department.
    - 4- Written tests.
    - 5- Direct observations.

	11- Course structure				
weeks	Hours	Required educational outcomes	Name of the unit or topic	Teaching method	Evaluation method
1	2 the. + 2 prac.	The student understands the lesson	Safety precautions from the hazards of laboratory materials, chemicals and electricity. Cells(Define – Types – Structures of cells), Tissues (Define, Types, Structures of tissues), Muscles (Define, Types, Structures of muscles)	Theoretical and practical lecture	Discussion , asking some questions and a quick exam
2	2 the. + 2 prac.	The student understands the lesson	Safety precautions from the hazards of laboratory materials, chemicals and electricity. Cells(Define – Types – Structures of cells), Tissues (Define, Types, Structures of tissues), Muscles (Define, Types, Structures of muscles)	Theoretical and practical lecture	Discussion , asking some questions and a quick exam
3	2 the. + 2 prac.	The student understands the lesson	Blood –Functions – properties composition – blood plasma –blood serumErythrocyte(propri eties –shapes-number – functions) production	Theoretical and practical lecture	Discussion , asking some questions and a quick

			and degradation		OVOM
4	2 the. + 2 prac.	The student understands the lesson	and degradation  Blood –Functions – properties composition – blood plasma –blood serumErythrocyte(propri eties –shapes-number – functions) production and degradation	Theoretical and practical lecture	exam Discussion , asking some questions and a quick exam
5	2 the. + 2 prac.	The student understands the lesson	5 Leukocyte ( Types – Shapes –number-functions )	Theoretical and practical lecture	Discussion , asking some questions and a quick exam
6	2 the. + 2 prac.	The student understands the lesson	Hemoglobin-functions – normal value- composition Platelets( number-functions) Coagulation of blood – anticoagulant	Theoretical and practical lecture	Discussion , asking some questions and a quick exam

# (Biostatisics1)

# **Course description**

This course description provides a concise summary of the most important course characteristics and the learning outcomes that the student is expected to achieve, demonstrating whether he or she has made the most of the learning opportunities available. It must be linked to the program description.

1- Educational institution Middle Technical University-

	Technical Institute / Kut
2- Scientific Department/Center	Department of Community Health
	<b>Technologies First Phase</b>
3- Course name/code	Biostatisics1
4- The programs in which he	Department
participates	
5- Available forms of attendance	Built-in
6- Semester/year	Academic year 2023-2024 first
	semester
7- Number of study hours (total)	theoretical2 * 15 weeks = 30 total
	hours
8- The date this description was	1/9/2023
prepared	

9- Course objectives

At the end of the academic year, the student will be able to process and analyze statistical data and reach correct conclusions.

10- Course outcomes and teaching, learning and evaluation methods

# A- Cognitive objectives

The student learns to the steps of the statistical method

The student learns to the types of classified and unclassified data and the sources of their collection

The student learns to calculating statistical parameters and indicators-

The student learns to representing data graphically

The student learns to analyzing and interpreting results and predicting the future

## **B-** The skills objectives of the course

- 1- Display and represent data graphically.
- 2- Calculating measures of central tendency.
- 3- Preparing the questionnaire form
- 4- Calculating the ratio, rate and proportion.

- 5- Calculating mortality metrics.
- 6- Calculating birth and fertility standards

# **C-** <u>Teaching and learning methods</u>

- 1- The teacher delivers detailed theoretical lectures.
- 2- The teacher requests the implementation of some skills.
- 3- Asking some intellectual questions.
- 4- Requesting the submission of some reports from the library and the Internet.
- 5- Using the method of brainstorming and feedback by activating the accumulated experiences of students.

#### **D- Evaluation methods**

- 1- Individual evaluation by giving the student the opportunity to answer some questions.
- 2- Group evaluation through a short and quick exam.
- 3- Evaluation through daily assignments.
- 4- Monthly, end-of-semester and final exams.
- E- Emotional and value-based goals
- 1- Urging the student to think in different ways.
- 2- Urging the student to think about the importance of the subject and the danger of neglecting it.
- 3- Urging the student to acquire some skills that he can apply in practical life.

#### F- Evaluation methods

- 1- A monthly exam 30% that takes into account daily activities.
- 2- End of semester exam 70%.
- G- General and qualifying transferable skills (other skills related to employability and personal development)
- 1- Enabling students to write reports related to Biostatistics.
- 2- Enabling students to perform matching the practical reality.
- 3- Enabling students for continuous self-development after graduation.

- 11- Preparing and implementing research and projects by students within the vocabulary of the Department of Community Health Technologies' subjects and presenting them at student conferences.
- 2- Developing an update to the vocabulary of the Fundamentals of Biostatistics subject to keep pace with development in order to achieve personal development for the level of students.
- 3- Discussion of research and projects by scientific committees in the department.
- 4- Written tests.
- 5- Direct observations.

11- C	11- Course structure						
We ek	Ho urs	Required educational outcomes	Name of the unit or topic	Teaching method	Evaluation method		
1	2	The student learns about the concept of statistics and an overview of statistical analyses	Definition of statistics. Data collection methods	Theoretical and practical lecture	Discussion , asking some questions and a quick exam		
2	2	The student learns how to present and describe statistical data	Display and describe statistical data,	Theoretical and practical lecture	Discussion , asking some questions and a quick exam		

3	2	The student learns how to represent frequency distributions for classified and unclassified data	Representing frequency distributions for classified and unclassified data	Theoretical and practical lecture	Discussion , asking some questions and a quick exam
4	2	The student becomes familiar with the tabular display of frequency distribution tables	Tabular display (frequency distribution tables)	Theoretical and practical lecture	Discussion , asking some questions and a quick exam
5	2	The student learns how to calculate measures of central tendency /arithmetic mean using different methods	Measures of central tendency/arithmetic mean	Theoretical and practical lecture	Discussion , asking some questions and a quick exam
6	2	The student learns how to calculate the median in different ways	the median	Theoretical and practical lecture	Discussion , asking some questions and a quick exam

The first sta

(Community Health)

## **Course description**

It aims to identify the most important concepts of community health and related techniques.

1- Educational institution	Middle Technical University- Technical Institute / Kut
2- Scientific Department/Center	Department of Community Health
	Technologies_First Phase
3- Course name/code	Community Health
4- The programs in which he participates	Department
5- Available forms of attendance	Built-in
6- Semester/year	Academic year 2023-2024, First semester
7- Number of study hours (total)	theoretical2 * 15 weeks = 30total hours and 3 practical * 15 weeks = 45 hours
8- The date this description was prepared	19/2/2024

- 9- Course objectives
- 1- At the end of the academic year, students will have the ability to learn about the most important services provided at the primary health care center
- 10- Course outcomes and teaching, learning and evaluation methods

# A- Cognitive objectives

Identify the procedures that must be followed inside and outside the school health unit within the primary health care center.

Identify the most important basic components of food and the most important malnutrition diseases for children and how to deal with them.

The student should be able to identify the most important respiratory infections in children.

The student should be able to apply procedures for preventing and controlling communicable diseases.

The student should be able to apply the art of health education.

#### **B-** The skills objectives of the course

- 1- He can manage programs related to community health, such as maternal and child care, vaccinations, etc.
- 2- It can help the doctor diagnose and treat in some way, basically and simply when necessary

# C- Teaching and learning methods

- 1- The teacher delivers detailed theoretical lectures.
- 2- The teacher requests the implementation of some skills.
- 3- Asking some intellectual questions.
- 4- Requesting the submission of some reports from the library and the Internet.
- 5- Using the method of brainstorming and feedback by activating the accumulated experiences of students.

# **D-** Evaluation methods

- 1- Individual evaluation by giving the student the opportunity to answer some questions.
- 2- Group evaluation through a short and quick exam.
- 3- Evaluation through daily assignments.
- 4- Monthly, end-of-semester and final exams.

#### E- Emotional and value-based goals

- 1- Urging the student to think in different ways.
- 2- Urging the student to think about the importance of the subject and the danger of neglecting it.
- 3- Urging the student to acquire some skills that he can apply in practical life.

#### F- Evaluation methods

- 1- A monthly exam (15% practical + 25% theoretical) that takes into account daily activities.
- 2- End of semester exam (25% practical + 35% theoretical).
- G- General and qualifying transferable skills (other skills related to employability and personal development)

- 1- Enabling students to write reports related to general anatomy.
- 2- Enabling students to perform matching the practical reality.
- 3- Enabling students for continuous self-development after graduation.

- 11- Preparing and implementing research and projects by students within the vocabulary of the Department of Community Health Technologies' subjects and presenting them at student conferences.
- 2- Developing an update to the vocabulary of the Fundamentals of general anatomy subject to keep pace with development in order to achieve personal development for the level of students.
- 3- Discussion of research and projects by scientific committees in the department.
- 4- Written tests.
- 5- Direct observations.

	hours
8- The date this description was	20/2/2024
prepared	

- 9- Course objectives
- 6. The student will be able to get a simple general idea about: pathogens (bacteria, fungi, parasites and viruses), immunity and disease prevention.
- 10- Course outcomes and teaching, learning and evaluation methods
- A- Cognitive objectives
- a. The student gets to know general concepts about the most important microbiology terms.

b. The student learns about the precise structure of most microscopic organisms.

# B- The skills objectives of the course

- 10. Student will be able to:
  - To diagnose some simple cases in his field work, instead of specialest, when specialest is absent.
  - Do some tests in the labs.
  - Collect, preserve and transport the pathgenic samples.
  - Give an advice for disease prevention and control.

#### C- Teaching and learning methods

- 1- The teacher delivers detailed theoretical lectures.
- 2- The teacher requests the implementation of some skills.
- 3- Asking some intellectual questions.
- 4- Requesting the submission of some reports from the library and the Internet.
- 5- Using the method of brainstorming and feedback by activating the accumulated experiences of students.

#### **D-** Evaluation methods

- 1- Individual evaluation by giving the student the opportunity to answer some questions.
- 2- Group evaluation through a short and quick exam.
- 3- Evaluation through daily assignments.
- 4- Monthly, end-of-semester and final exams.
- E- Emotional and value-based goals
- 1- Urging the student to think in different ways.
- 2- Urging the student to think about the importance of the subject and the danger of neglecting it.
- 3- Urging the student to acquire some skills that he can apply in practical life.

Lecturer of the subject

#### (Biostatisics2)

# **Course description**

This course aims to introduce the student to the basic concepts of scientific research and the steps and procedures of research Scientific and types of scientific research methods. In addition to introducing the student to the different methods of collecting and analyzing data, How can the student choose the appropriate source that suits the nature of his research? Also through this course

Introducing the student to how to document scientific research and how the student can benefit from the Internet in scientific research And writing a scientific research report, and how to write a scientific research report.

1- Educational institution	Middle Technical University-
	<b>Technical Institute / Kut</b>
2- Scientific Department/Center	<b>Department of Community Health</b>
	Technologies /second Phase
3- Course name/code	Biostatisics2
4- The programs in which he	department
participates	
5- Available forms of attendance	Built-in
6- Semester/year	Academic year 2023-2024 second
	semester
7- Number of study hours (total)	Theoretical 2 * 15 weeks = 30 total
	hours
8- The date this description was	19/2/2024

### prepared

9- Course objectives

At the end of the academic year, the student will be able to process and analyze statistical data and reach correct conclusions. As well as writing the research project.

10- Course outcomes and teaching, learning and evaluation methods

#### A- Cognitive objectives

The student will be able to:

- Dealing with statistical data and how to select samples.
- Identifying the types of medical health research.
- Organizing questionnaire forms and how to deal with them statistically

### B- The skills objectives of the course

He plans a mini-scientific research through:

- Choose a research problem.
- Designing the research tool.

Choosing a population and research sample

# **C-** <u>Teaching and learning methods</u>

- 1- The teacher delivers detailed theoretical lectures.
- 2- The teacher requests the implementation of some skills.
- 3- Asking some intellectual questions.
- 4- Requesting the submission of some reports from the library and the Internet.
- 5- Using the method of brainstorming and feedback by activating the accumulated experiences of students.

#### **D- Evaluation methods**

- 1- Individual evaluation by giving the student the opportunity to answer some questions.
- 2- Group evaluation through a short and quick exam.
- 3- Evaluation through daily assignments.

- 4- Monthly, end-of-semester and final exams.
- E- Emotional and value-based goals
- 1- Urging the student to think in different ways.
- 2- Urging the student to think about the importance of the subject and the danger of neglecting it.
- 3- Urging the student to acquire some skills that he can apply in practical life.
- F- Evaluation methods
- 1- A monthly exam 30% that takes into account daily activities.
- 2- End of semester exam 70%.
- G- General and qualifying transferable skills (other skills related to employability and personal development)
- 1- Enabling students to write reports related to Biostatistics.
- 2- Enabling students to perform matching the practical reality.
- 3- Enabling students for continuous self-development after graduation.
- H- Other learning and teaching methods
- 11- Preparing and implementing research and projects by students within the vocabulary of the Department of Community Health Technologies' subjects and presenting them at student conferences.
- 2- Developing an update to the vocabulary of the Fundamentals of Biostatistics subject to keep pace with development in order to achieve personal development for the level of students.

Lecturer of the subject

# (Physiology2)

# **Course description**

It aims to identify the most important terms related to the subject of human physiology, which includes identifying the functions of the body's organs in general and detail, such as the circulatory system, as well as the blood and its functions.

1- Educational institution	Middle Technical University-
	<b>Technical Institute / Kut</b>
2- Scientific Department/Center	<b>Department of Community Health</b>
	Technologies_ The first Phase
3- Course name/code	Physiology 2
4- The programs in which he participates	Department
5- Available forms of attendance	Built-in
6- Semester/year	Academic year 2023-2024, second
	semester
7- Number of study hours (total)	Theoretical 2 * 15 weeks = 30 total
·	hours and 2 practical $*$ 15 weeks = 30
	hours
8- The date this description was	2/24/2024
prepared	

- 9- Course objectives
- 7. At the end of the academic year, students will have the ability to identify all parts of the human organs functions .
- 10- Course outcomes and teaching, learning and evaluation methods
- A- Cognitive objectives
- a. The student gets to know general concepts about the most important physiology terms.

b. The student learns about the precise structure of all tissues and organs of the body.

# B- The skills objectives of the course

- 11. He can link the functions of each part of the body.
- 12. It can help the doctor diagnose and treat in some way, basically and simply when necessary.

# C- Teaching and learning methods

- 1- The teacher delivers detailed theoretical lectures.
- 2- The teacher requests the implementation of some skills.
- 3- Asking some intellectual questions.
- 4- Requesting the submission of some reports from the library and the Internet.
- 5- Using the method of brainstorming and feedback by activating the accumulated experiences of students.

### **D-** Evaluation methods

- 1- Individual evaluation by giving the student the opportunity to answer some questions.
- 2- Group evaluation through a short and quick exam.
- 3- Evaluation through daily assignments.
- 4- Monthly, end-of-semester and final exams.
- E- Emotional and value-based goals
- 1- Urging the student to think in different ways.
- 2- Urging the student to think about the importance of the subject and the danger of neglecting it.
- 3- Urging the student to acquire some skills that he can apply in practical life.

#### F- Evaluation methods

- 1- A monthly exam (15% practical + 25% theoretical) that takes into account daily activities.
- 2- End of semester exam (25% practical + 35% theoretical).
- G- General and qualifying transferable skills (other skills related to employability and personal development)

- 1- Enabling students to write reports related to physiology.
- 2- Enabling students to perform matching the practical reality.
- 3- Enabling students for continuous self-development after graduation.

# H- Other learning and teaching methods

- 11- Preparing and implementing research and projects by students within the vocabulary of the Department of Community Health Technologies' subjects and presenting them at student conferences.
- 2- Developing an update to the vocabulary of the Fundamentals of physiology subject to keep pace with development in order to achieve personal development for the level of students.
- 3- Discussion of research and projects by scientific committees in the department.
- 4- Written tests.
- 5- Direct observations.

# (Fundamental of Nursing 2)

### **Course description**

The aim of studying Foundations of Nursing is to provide students with the basic knowledge and skills to provide health care in the best possible way. This includes understanding medical theories and basic scientific concepts, developing critical thinking and analytical skills, in addition to learning the arts of interacting effectively with patients and understanding professional ethics.

of interacting effectively with patients

	hours and 2 practical * 15 weeks =	
	30 hours	
8- The date this description was	25/2/2024	
prepared		
9- Course objectives		
10. Knows the normal ratios of chemical compounds in the blood.		

# Recognize the variables that can occur to these compounds in abnormal cases.

10- Course outcomes and teaching, learning and evaluation methods

#### A- Cognitive objectives

- a. It uses the levels of these compounds in the blood serum to measure the efficiency of the functional performance of some body organs such as the liver and kidneys.
- b. Diagnoses various diseases in terms of changes that occur in the levels of these compounds in blood and other body fluids.

#### B- The skills objectives of the course

- 17. Know the different laboratory methods that are used in clinical chemistry laboratories.
- 18. Uses devices that are used in clinical chemistry laboratories 9) Measures the levels of chemical components important in diagnosing diseases in the blood laboratory...

#### C- Teaching and learning methods

- 1- The teacher delivers detailed theoretical lectures.
- 2- The teacher requests the implementation of some skills.
- 3- Asking some intellectual questions.
- 4- Requesting the submission of some reports from the library and the Internet.
- 5- Using the method of brainstorming and feedback by activating the accumulated experiences of students.

#### **D- Evaluation methods**

Keeping pace with development	s in society

### **Course description**

It aims to identify the most important international health terms related to humans and society globally, which includes identifying all global health measures related to preventing the spread of infectious diseases and toxic and dangerous substances to human health, society and the environment internationally in an accurate and detailed manner.

1- Educational institution	Middle Technical University- Technical Institute / Kut
2- Scientific Department/Center	Department of Community Health Technologies second Phase

3- Course name/code	Community health
4- The programs in which he participates	department
5- Available forms of attendance	Built-in
6- Semester/year	Academic year 2023-2024, second semester
7- Number of study hours (total)	theoretical2 * 15 weeks = 30 total hours and 2 practical * 15 weeks = 45 hours
8- The date this description was prepared	19/2/2024

- 9- Course objectives
- 1- At the end of the academic year, the student will be able to become familiar with the concepts, terminology and procedures of international health taken and followed globally and the techniques related to it.
- 10- Course outcomes and teaching, learning and evaluation methods

## A- Cognitive objectives

- 1- The student becomes familiar with general concepts about the most important terms, activities, events and procedures of international health.
- **B-** The skills objectives of the course
- 1 -The student will be familiar with the most important methods of global prevention and control of infectious diseases.
- 2- For the student to become familiar with the most important laws and procedures related to international health that apply to ports of entry and exit from countries by air, sea, and land to prevent the spread of infectious diseases.
- C- Teaching and learning methods
- 1- The teacher delivers detailed theoretical lectures.
- 2- The teacher requests the implementation of some skills.
- 3- Asking some intellectual questions.
- 4- Requesting the submission of some reports from the library and the Internet.

5- Using the method of brainstorming and feedback by activating the accumulated experiences of students.

#### **D- Evaluation methods**

- 1- Individual evaluation by giving the student the opportunity to answer some questions.
- 2- Group evaluation through a short and quick exam.
- 3- Evaluation through daily assignments.
- 4- Monthly, end-of-semester and final exams.

#### E- Emotional and value-based goals

- 1- Urging the student to think in different ways.
- 2- Urging the student to think about the importance of the subject and the danger of neglecting it.
- 3- Urging the student to acquire some skills that he can apply in practical life.

#### F- Evaluation methods

- 1- A monthly exam (15% practical + 25% theoretical) that takes into account daily activities.
- 2- End of semester exam (25% practical + 35% theoretical).

# G- General and qualifying transferable skills (other skills related to employability and personal development)

- 1- Enabling students to write reports related to international health.
- 2- Enabling students to perform matching the practical reality.
- 3- Enabling students for continuous self-development after graduation.

#### H- Other learning and teaching methods

- 11- Preparing and implementing research and projects by students within the vocabulary of the Department of Community Health Technologies' subjects and presenting them at student conferences.
- 2- Developing an update to the vocabulary of the Fundamentals of international health subject to keep pace with development in order to achieve personal development for the level of students.

- 3- Discussion of research and projects by scientific committees in the department.
- 4- Written tests.
- **5- Direct observations.**

## (Health inspection)

## **Course description**

This course description provides a necessary summary of the most important characteristics of the course and the learning outcomes that the student is expected to achieve.

1- Educational institution	Middle Technical University-
	Technical Institute / Kut
2- Scientific Department/Center	Department of Community Health
	Technologies_second Phase

3- Course name/code	Health inspection
4- The programs in which he	department
participates	
5- Available forms of attendance	Built-in
6- Semester/year	Academic year 2023-2024, second
	semester
7- Number of study hours (total)	theoretical2 * 15 weeks = 30total
	hours and 4 practical $*$ 15 weeks = 60
	hours
8- The date this description was	22/2/2024
prepared	

- 9- Course objectives
- 12. 1- At the end of the academic year, students will have the ability to become familiar with the programs and concept of health inspection and diagnose the conditions and specifications that must be legally available in stores subject to health supervision.
- 10- Course outcomes and teaching, learning and evaluation methods
- A- Cognitive objectives
- 1-Knowing the foundations and rules of the inspection process (a
- **2-Knowing the health conditions and specifications in stores subject** (b to health supervision
- B- Knowledge of the foundations and rules of the inspection process
  Knowing the health conditions and specifications in stores subject to health supervision.
- C- Teaching and learning methods
- 1-The teacher delivers detailed theoretical lectures.
- 2-The teacher requests the implementation of some skills.
- 3-Asking some intellectual questions.
- 4-Requesting the submission of some reports from the library and the Internet.
- 5-Using the method of brainstorming and feedback by activating the

### accumulated experiences of students.

- **D- Evaluation methods**
- 1- Individual evaluation by giving the student the opportunity to answer some questions.
- 2- Group evaluation through a short and quick exam.
- 3- Evaluation through daily assignments.
- 4- Monthly, end-of-semester and final exams.
- E- Emotional and value-based goals
- 1- Urging the student to think in different ways.
- 2- Urging the student to think about the importance of the subject and the danger of neglecting it.
- 3- Urging the student to acquire some skills that he can apply in practical life.
- F- Evaluation methods
- 1- A monthly exam (15% practical + 25% theoretical) that takes into account daily activities.
- 2- End of semester exam (25% practical + 35% theoretical).
- G- General and qualifying transferable skills (other skills related to employability and personal development)
- 1-Enabling students to write reports on health inspection and control.
- 2-Enabling students to perform matching the practical reality.
- 3-Enabling students for continuous self-development after graduation.
- H- Other learning and teaching methods
- 1-Preparing and implementing research and projects by students within the vocabulary of the
- Department of Community Health Technologies and presenting them at student conferences.
- 2-Updating the vocabulary of the health inspection and control subject to keep pace with developments in order to achieve personal development of the students' level.
- 3-Discussion of research and projects by scientific committees in the

department.

·	

- 9- Course objectives
- 13. At the end of the academic year, students will have the ability to identify all human disease.
- 10- Course outcomes and teaching, learning and evaluation methods
- **A- Cognitive objectives**
- a. The student gets to know general concepts about the most important disease terms.
- b. The student learns about the precise structure of all tissues and organs of the body.
- **B-** The skills objectives of the course
- 22. He can link the functions and anatomy of each part of the body.
- 23. It can help the doctor diagnose and treat in some way, basically and simply when necessary.
- C- Teaching and learning methods
- 1- The teacher delivers detailed theoretical lectures.

- 2- The teacher requests the implementation of some skills.
- 3- Asking some intellectual questions.
- 4- Requesting the submission of some reports from the library and the Internet.
- 5- Using the method of brainstorming and feedback by activating the accumulated experiences of students.

## **D-** Evaluation methods

- 1- Individual evaluation by giving the student the opportunity to answer some questions.
- 2- Group evaluation through a short and quick exam.
- 3- Evaluation through daily assignments.
- 4- Monthly, end-of-semester and final exams.
- E- Emotional and value-based goals
- 1- Urging the student to think in different ways.
- 2- Urging the student to think about the importance of the subject and the danger of neglecting it.
- 3- Urging the student to acquire some skills that he can apply in practical life.

### F- Evaluation methods

- 1- A monthly exam (15% practical + 25% theoretical) that takes into account daily activities.
- 2- End of semester exam (25% practical + 35% theoretical).
- G- General and qualifying transferable skills (other skills related to employability and personal development)
- 1- Enabling students to write reports related to general anatomy.
- 2- Enabling students to perform matching the practical reality.
- 3- Enabling students for continuous self-development after graduation.

## H- Other learning and teaching methods

- 11- Preparing and implementing research and projects by students within the vocabulary of the Department of Community Health Technologies' subjects and presenting them at student conferences.
- 2- Developing an update to the vocabulary of the Fundamentals of general

anatomy subject to keep pace with development in order to achieve personal development for the level of students.

- 3- Discussion of research and projects by scientific committees in the department.
- 4- Written tests.
- 5- Direct observations.

	semester
7- Number of study hours (total)	theoretical2 * 15 weeks = 30 total
	hours and 2 practical * 15 weeks = 45
	hours
8- The date this description was	19/2/2024
prepared	

- 9- Course objectives
- 1-At the end of the academic year, the student will be able to become familiar with the concepts of community health and the techniques related to it.
- 10- Course outcomes and teaching, learning and evaluation methods
- A- Cognitive objectives

1-The student gets to know general concepts about the most important terms, activities and events of community health.

## B- The skills objectives of the course

- 1 -To know how to organize forms for pregnant women and children at the family registrar.
- 2- To follow up on those who have dropped out of vaccinations and health education.
- 3- To be able to make home visits and carry out field work in schools and institutes for the disabled.

#### **C-** Teaching and learning methods

- 1- The teacher delivers detailed theoretical lectures.
- 2- The teacher requests the implementation of some skills.
- 3- Asking some intellectual questions.
- 4- Requesting the submission of some reports from the library and the Internet.
- 5- Using the method of brainstorming and feedback by activating the accumulated experiences of students.

#### **D- Evaluation methods**

- 1- Individual evaluation by giving the student the opportunity to answer some questions.
- 2- Group evaluation through a short and quick exam.
- 3- Evaluation through daily assignments.
- 4- Monthly, end-of-semester and final exams.

#### E- Emotional and value-based goals

- 1- Urging the student to think in different ways.
- 2- Urging the student to think about the importance of the subject and the danger of neglecting it.
- 3- Urging the student to acquire some skills that he can apply in practical life.

#### F- Evaluation methods

1- A monthly exam (15% practical + 25% theoretical) that takes into account daily activities.

- 2- End of semester exam (25% practical + 35% theoretical).
- G- General and qualifying transferable skills (other skills related to employability and personal development)
- 1- Enabling students to write reports related to community health.
- 2- Enabling students to perform matching the practical reality.
- 3- Enabling students for continuous self-development after graduation.

# H- Other learning and teaching methods

prepared	
6- Semester/year  7- Number of study hours (total)  8- The date this description was	Academic year 2023-2024, second semester theoretical2 * 15 weeks = 30total hours and 4 practical * 15 weeks = 60 hours

- 9- Course objectives
  - 1- At the end of the academic year, students will have the ability to become familiar with the programs and concept of health inspection and diagnose the conditions and specifications that must be legally available in stores subject to health supervision.
- 10- Course outcomes and teaching, learning and evaluation methods
- A- Cognitive objectives
- 1-Knowing the foundations and rules of the inspection process
- **2-Knowing the health conditions and specifications in stores subject to** health supervision
- B- Knowledge of the foundations and rules of the inspection process
  Knowing the health conditions and specifications in stores subject to health supervision.

### C- Teaching and learning methods

- 1-The teacher delivers detailed theoretical lectures.
- 2-The teacher requests the implementation of some skills.
- 3-Asking some intellectual questions.
- 4-Requesting the submission of some reports from the library and the Internet.
- 5-Using the method of brainstorming and feedback by activating the accumulated experiences of students.

### **D- Evaluation methods**

- 1- Individual evaluation by giving the student the opportunity to answer some questions.
- 2- Group evaluation through a short and quick exam.
- 3- Evaluation through daily assignments.
- 4- Monthly, end-of-semester and final exams.
- E- Emotional and value-based goals
- 1- Urging the student to think in different ways.
- 2- Urging the student to think about the importance of the subject and the danger of neglecting it.
- 3- Urging the student to acquire some skills that he can apply in practical life.

#### F- Evaluation methods

- 1- A monthly exam (15% practical + 25% theoretical) that takes into account daily activities.
- 2- End of semester exam (25% practical + 35% theoretical).
- G- General and qualifying transferable skills (other skills related to employability and personal development)
- 1-Enabling students to write reports on health inspection and control.
- 2-Enabling students to perform matching the practical reality.
- 3-Enabling students for continuous self-development after graduation.

### H- Other learning and teaching methods

1-Preparing and implementing research and projects by students within the vocabulary of the

Department of Community Health Technologies and presenting them at student conferences.

- 2-Updating the vocabulary of the health inspection and control subject to keep pace with developments in order to achieve personal development of the students' level.
- 3-Discussion of research and projects by scientific committees in the department.
- 4-Written tests.
- 5-Direct observations.
